DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group II, claims 1-12, in Paper No. 3 are acknowledged.
2. Claims 13-20 have been canceled (paper No. 3).

Oath/Declaration

3. The declaration filed 03/01/02 is acceptable.

Claim Objections

4. Claim 9 is objected to because of the following informalities:

The recitations "CE" in claim 9, should be changed to --CS--.

In claim 1, line 15, the recitation "units" should be changed to --unit--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1, 3-5, 9 and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by Kang (6,242,285, applicant admitted prior art).

The figures and reference numbers referred to in this office action are used merely to indicate an example of a specific teaching and are not to be taken as limiting.

Regarding claims 1, 3-5, 9 and 11, Kang (see specifically figures 3, 4A-4B-4D-4E) discloses a method for forming a stacked package of an upper semiconductor unit IC-B and a lower semiconductor unit IC-A having identical lead layouts, the method comprising: (a) flattening leads of the upper semiconductor package unit IC-B (Col. 4, lines 10+ and lines 40+); (b) shortening a length of a chip-select lead (CS) of the upper package unit IC-B such that this chip-select lead does not contact a lead of the lower package unit when the upper package unit is stacked atop the lower package unit in the same orientation (see figure 4A, Col. 3, lines 60+, Col. 6, lines 42+, lines 66+, Col. 7, lines 1+); (c) stacking the upper package unit IC-B on the lower package unit IC-A in the same orientation (Col. 6, lines 20+); (d) forming a direct electrical connection between the chip-select lead (CS) and a not-connected lead (NC) as shown in figure 4D (Col. 7, lines 22+); and (e) forming direct electrical connections between leads of the upper package unit and corresponding leads of the lower package unit by soldering, excluding the chip-select lead CS (Col. 6, lines 3+ and lines 21+).

Allowable Subject Matter

7. Claims 2, 6-8, 10 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. The following is a statement of reasons for the indication of allowable subject matter:

The prior art taken either singly or in combination fails to anticipate or fairly suggest:

- a) a method step of forming the direct electrical connection by *soldering* the two leads of the upper semiconductor package unit, as recited in claims 2 and 6,
- b) a method step of forming a direct electrical connection between a *clock-enable lead* and *not-connected lead* of the upper semiconductor package unit, as recited in claims 7 and 8,
- c) a method step of shortening a length of a *clock-enable lead* of the upper semiconductor package unit, as recited in claim 10, and
- d) a method step of forming direct electrical connections between leads of the upper package unit and corresponding leads of the lower package unit excluding selecting the *clock-enable lead*, as recited in claim 12, especially when these limitations are considered within the specific combination claimed.
